

HKU-UCL Partnership for
Innovations in Non-Pharmacological
Interventions for Dementia

2nd International

Cognitive Stimulation Therapy (CST)

Conference

About CST

Now being offered in the majority of UK memory clinics and in over 24 countries, CST is an evidence-based intervention for enhancing cognition and quality of life in people with dementia. It is a non-pharmacological intervention recommended in the UK National Clinical Practice Guideline and the World Alzheimer's Report. International researchers are working to advance this intervention to help people with dementia and their family.
